

1. Executive Summary

1.1 Project Overview

Describe this project or product and its intended audience, or provide a link or reference to the project charter.

Our project's aim is to create a software application to solve the technical issues for a kindergarten in Tirana. The software's name is ABC, same as the kindergarten, and its main idea is to provide technological help to the kindergarten administrator, employees and parents of children, to fix all the communications bugs that exist within the business. In the front end the administrator or the employee and parents who will have permission will see the page created with JavaScript /Bootstrap or JSON and will access to each of the child's data like his name, age, parent contact and any detail related with the monthly payment or his advance through the time he has been there. On the back end we will work with PHP technology and all the data will be saved in a specific database. This will provide help to the kindergarten owner, administrator, economist, employee or people from human resource that work there and also the parents of the children. Based on the economic research we will do for the kindergarten, every problem the audience can't get through is our project aim to solve.

A visual representation would be:

1.2 Purpose and Scope of this Specification

Describe the purpose of this specification and its intended audience. Include a description of what is within the scope what is outside of the scope of these specifications.

In scope

- It's aim is to conduct data from the specified database.
- For the administrator , he will be able to use the data provided to check with the advancement of the children or economic issues (like monthly payments).
- It will be user-friendly and with some simple buttons , you can be able to take the information needed.
- You can add information all the time or remove data.
- Employees can access the web page via their respective accounts and log in their data or extract data from the application.
- Parents can access with their accounts very easily and get data about their children information, the activities the kindergarten is doing or pay their monthly fee.
- Legislative issues like the conduct of research is lawful and it data will not be misused.

Out of Scope

The following items in phase 3 of Project A are out of scope:

- Our aim is to help the kindergarten administrator or human resource staff or economist and it's not our aim to provide information to outsiders
- Parents (customers) are an important part of the research and the use of application, the app is user friendly to help them get data for their children.
- This is not a demand from the customer side, but will help them a lot in time. They could access the page anytime without calling the staff of the kindergarten or going there themselves.
- Relations between the kindergarten and the kindergarten administrator will be affected.
- Relations between the kindergarten employees (teachers) and parent will be improved.
- Relation between employees and administrator of the kindergarten will be easy. Data accessible all the time.

2. Product/Service Description

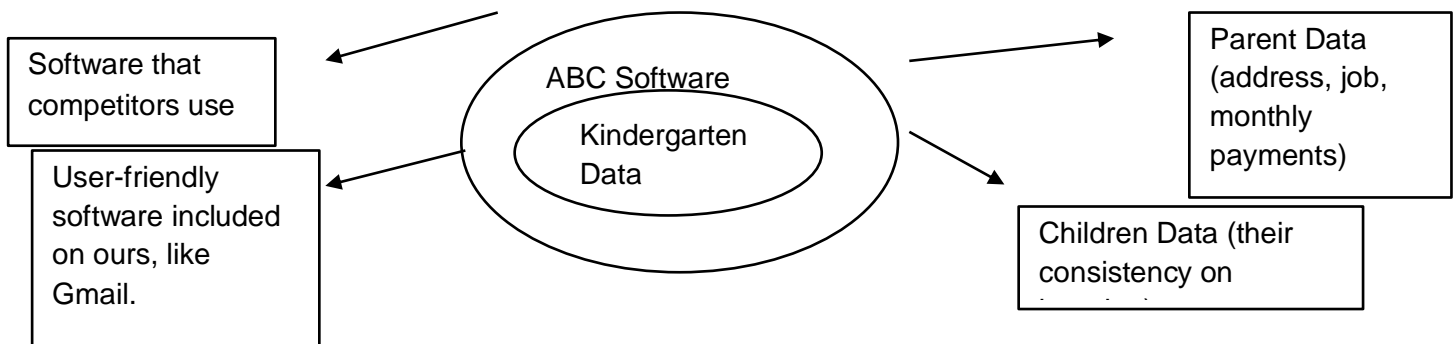

In this section, describe the general factors that affect the product and its requirements. This section should contain background information, not state specific requirements (provide the reasons why certain specific requirements are later specified).

2.1 Product Context

How does this product relate to other products? Is it independent and self-contained? Does it interface with a variety of related systems? Describe these relationships or use a diagram to show the major components of the larger system, interconnections, and external interfaces.

This product is independent and self-contained; it has no relation to other businesses except the ABC kindergarten even though we conducted a market analysis to analyze the other technologies competitors were using. Within the kindergarten itself it is related with the processes around the business itself, every data related to the customer (in our case the children and their parents) is the base for the functioning of our software. So the software is depended on the database that will provide the information for each child for their education field and also about the economic problems. If the kindergarten won't provide data then the software

would be useless because by collecting data through time it will help to find them easier again the future and reuse.

2.2 User Characteristics

Create general customer profiles for each type of user who will be using the product. Profiles should include:

Our software will include only three users, the administrator of the kindergarten and they can provide access to the economist or other human resource department specialist and the kindergarten owner in case they need to check or audit the data.

The administrator of the software is the same person, who administrates the kindergarten in real life. She will update the data in a specific amount of time (for example each month). She will make sure all the confidential data is entered in the right way and only used for lawful purposes, by also deciding who she will provide access too.

The second user will be the employees of the kindergarten, which are the teachers of the children. Each teacher will be able to access the web application with their accounts and will be provided some services like home add attendance of the kids and write reports for each of them.

The parents of the children will also be users and able to access the information about their children or the kindergarten. Services like the payment of monthly fee will be granted via the web.

Technical expertise for the software of course it granted by us since the kindergarten doesn't have an IT specialist.

Security will also be checked from the supervisors of the administrator, who can be the owner itself or human resource specialists.

2.3 Assumptions

The system administrator should always keep the system up to date every day. All information of the day of each child should be sent to the respective day, every day. Every operation and action taken during that day, should be written on the

system, not days later. Ex: if a payment is done, today it should be registered today, if the system does not work then it should be written in a diary of administrator and on the day that it should be registered, administrator will leave a comment about the exact day of payment.

The teachers every day can change information about the kids, if they have any specific needs, did something extra during the day, eat, slept, and took part in activities or their attendance.

Also the parents will be able to track their children progress on the other side and also complete bills to the kindergarten, pay their monthly fee or other payments needed in specific cases or activities.

2.4 Constraints

Before we used to keep our data in Excel and Word files and before we start working with the software we should spend some time transferring data from those files to the app.

The kindergarten will not have an IT specialist working all time there, so sometimes that the administrator may have problems, they will have to wait for our service and this may take a bit longer.

Also, for the security reasons because that software will have much confidential and personal information we should have a file for log-ins in the app.

This app, is going to work only on computers and may be difficult if the administrator would like to use it on the phone or somewhere else.

2.5 Dependencies

Our software program will be extremely dependent on the Database that will provide the information for each child for their education field and also about the economic problems. If the kindergarten won't provide data then the software would be useless.

We are also dependent on the parents a little bit, if they do not like the idea of only sending them Whatsapp messages, we have to change the way of keeping them up to date, anyways this can happen after we start using the app in the kindergarten.

3. Requirements

Describe all system requirements in enough detail for designers to design a system satisfying the requirements and testers to verify that the system satisfies requirements.

Organize these requirements in a way that works best for your project. See Appendix D, Organizing the Requirements for different ways to organize these requirements.

Describe every input into the system, every output from the system, and every function performed by the system in response to an input or in support of an output. (Specify what functions are to be performed on what data to produce what results at what location for whom.)

Each requirement should be numbered (or uniquely identifiable) and prioritized.

See the sample requirements in Functional Requirements, and System Interface/Integration, as well as these example priority definitions:

Priority Definitions

The following definitions are intended as a guideline to prioritize requirements.

Priority 1 – The requirement is a “must have” as outlined by policy/law

Priority 2 – The requirement is needed for improved processing, and the fulfillment of the requirement will create immediate benefits

Priority 3 – The requirement is a “nice to have” which may include new functionality
It may be helpful to phrase the requirement in terms of its priority, e.g., "The value of the employee status sent to DIS **must be** either A or I" or "It **would be nice** if the application warned the user that the expiration date was 3 business days away". Another approach would be to group requirements by priority category.

A good requirement is:

Correct

Unambiguous (all statements have exactly one interpretation)

Complete (where TBDs are absolutely necessary, document why the information is unknown, who is responsible for resolution, and the deadline)

Consistent

Ranked for importance and/or stability

Verifiable (avoid soft descriptions like “works well”, “is user friendly”; use concrete terms and specify measurable quantities)

Modifiable (evolve the Requirements Specification only via a formal change process, preserving a complete audit trail of changes)

Does not specify any particular design

Traceable (cross-reference with source documents and spawned documents).

3.1 Functional Requirements

In the example below, the requirement numbering has a scheme - BR_LR_0## (BR for Business Requirement, LR for Labor Relations). For small projects simply BR-## would suffice. Keep in mind that if no prefix is used, the traceability matrix may be difficult to create (e.g., no differentiation between '02' as a business requirement vs. a test case)

The following table is an example format for requirements. Choose whatever format works best for your project.

For Example:

REQ#	Requirements	Comments	Priority	Date	Reviewed Approved
BR_01	The system is designed as a desktop application with two users.	This will be the main platform for users	2	21/04/2020	Amela Rahimi & Sindi Kalo
BR_02	The administrator of the system will have all the privileges. Will access in real time all the options of the system and the database for	Admin account has access in all functionalities of the system	1	21/04/2020	Amela Rahimi & Sindi Kalo

	children and employees.				
BR_03	Graphical data will be provided for the administrator and should be accessible all the time.	This is really important because for the administrator because he must have a clear view of the graphical data in order to access quicker the database	2	21/04/2020	Amela Rahimi & Sindi Kalo
BR_04	The system must provide the option for the administrator to register new children and new employees in the kindergarten.	This is very useful because it makes it easier to coordinate the teacher work since children are in groups and it gives facilities to the admin in order to see how much employees has and all their information.	2	21/04/2020	Amela Rahimi & Sindi Kalo
BR_05	Children and employees can be registered only by admin using the email of the kindergarten.	It is useful to identify the real children and employees of the kindergarten.	1	21/04/2020	Amela Rahimi & Sindi Kalo
BR_06	The administrator can log in by username and password	To provide easier log in for admin without using an email	1	21/04/2020	Amela Rahimi & Sindi Kalo

BR_07	The administrator can register new children by providing also other information such as: name, surname, parents name, address, email, date of birth.	The database created with these information will be one of the main operations of the admin	2	21/04/2020	Amela Rahimi & Sindi Kalo
BR_08	The administrator can register new employees by providing also other information such as: name, surname, address,	The database created with these information will be one of the main operations of the	2	21/04/2020	Amela Rahimi & Sindi Kalo

	email, date of birth and of course the paycheck.	admin			
BR_09	The administrator can see the data in a tabular form. This is done because tables and graphics give a more clear overview of all the children registered. There will be options for the administrator that make him able to delete or edit unnecessary information	Through these options the system will never be out of date because the admin will refresh it with new information but also deleting old information about children	2	21/04/2020	Amela Rahimi & Sindi Kalo
BR_10	The administrator can see the data in a tabular form. This is done because tables and graphics give a more clear overview of all the employees registered. There will be options for The administrator that make him able to delete or edit unnecessary information	Through these options the system will never be out of date because the admin will refresh it with new information but also delete old information about employees.	2	21/04/2020	Amela Rahimi & Sindi Kalo
BR_11	The admin can add children by creating an account for them with their name, surname, parents name, date of birth and email in their parents name in the form: namesurname@educationabc.al	This way the admin will have all the information and it would be easier to access.	2	21/04/2020	Amela Rahimi & Sindi Kalo
BR_12	The admin can add employees by creating an account for them with their name, surname, date of birth and email in	This way the admin will have all the information and it would be easier to access and to not	2	21/04/2020	Amela Rahimi & Sindi Kalo

	the form: namesurname@edc.ationabc.al and there will be a button with a tick watermark if the employee has taken the salary.	create delays with the paycheck of different employees.			
--	---	---	--	--	--

BR_13	The admin will have the opportunity to edit and delete other sections of the system as: activities and general information for the kindergarten that will be viewed by parents also	These two sections are made to promote the business to the parents and to keep them updated to the latest news of the activities.	2	21/04/2020	Amela Rahimi & Sindi Kalo
BR_14	The admin can add also new events in the activities section which will be visible for all the parents	The admin will have access to both these two sections.	2	21/04/2020	Amela Rahimi & Sindi Kalo
BR_15	The admin will be able to create a quick note for every employee	This will serve to a deeper understanding of the admin and employees and of course to improve their work	2	21/04/2020	Amela Rahimi & Sindi Kalo
BR_16	The admin will be able to have in every page of each child the phone number of one of their parents and when clicked will link immediately to WhatsApp.	WhatsApp is the common and the most useful communication tool that the admin has used with the parents until now	1	21/04/2020	Amela Rahimi & Sindi Kalo
BR_17	the admin will be able to have in every page of each child their email address in the above mentioned format of their parents and when clicked will link immediately to gmail.	This is a second and a more official communication tool.	1	21/04/2020	Amela Rahimi & Sindi Kalo
BR_18	the admin will be able to	WhatsApp is the	1	21/04/2020	Amela

	have In every page of every employee the phone and when clicked will link immediately to WhatsApp.	common and the most useful communication tool that the admin has used with the employees until now			Rahimi & Sindi Kalo
BR_19	the admin will be able to have In every page of each employee the email address in the above mentioned format of their parents and when clicked will link immediately to gmail.	This is a second and a more official communication tool example: paychecks	1	21/04/2020	Amela Rahimi & Sindi Kalo

BR_20	The admin will have a print option	The print option will serve as a document in case one of the parent wants a summary of all the time that his child has been in the kindergarten	2	21/04/2020	Amela Rahimi & Sindi Kalo
BR_21	The admin will be able to see if the parents have or have not done the payment	Here the admin will check the tick sign in each children account and will transmit to the economist.	1	21/04/2020	Amela Rahimi & Sindi Kalo

BR_22	The admin will be able to see the weekly reports for each teacher.	In this way the admin can evaluate the job and tasks assigned to each teacher and also be aware of the problems that every group has.	2	21/04/2020	Amela Rahimi & Sindi Kalo
-------	--	---	---	------------	---------------------------

BR_23	The admin can write	The report will help	2	21/04/2020	Amela
-------	---------------------	----------------------	---	------------	-------

	feedback for each report.	teachers to improve.			Rahimi & Sindi Kalo
--	---------------------------	----------------------	--	--	---------------------

BR_24	The admin can change the password and the username in the setting section.	He is responsible for his own settings.	1	21/04/2020	Amela Rahimi & Sindi Kalo
BR_25	The parents is the second user	The accessibility of the parent is limited.	1	21/04/2020	Amela Rahimi & Sindi Kalo
BR_26	Parents will log in only by the email that it was first created and the password	This is done for security reasons so that only the real parent can have access to the page of his child.	1	21/04/2020	Amela Rahimi & Sindi Kalo
BR_27	The parents will be able to write notes about the teacher of the their child	This will create a better communication with the teacher.	1	21/04/2020	Amela Rahimi & Sindi Kalo
BR_28	The parents will not be able to change the format of the email	This will be to avoid confusion and or a better and more clear view	1	21/04/2020	Amela Rahimi & Sindi Kalo
BR_29	Tha parents will be able to change the password	They will be responsible for their own settings	2	21/04/2020	Amela Rahimi & Sindi Kalo
BR_30	The parents will be able to view the information of ONLY their child	With email and password they will see the data of their	1	21/04/2020	Amela Rahimi & Sindi Kalo

		own child			
--	--	-----------	--	--	--

BR_31	The parents will be able to edit the data of their own child and these changes will be reflected to the admin	This is done to create facilities in case some information of the page changes through the time. Example: the phone number	2	21/04/2020	Amela Rahimi & Sindi Kalo
BR_32	The parents will be able to leave a note at the end of the page of their child. This change will be reflected also to the admin	Parents may leave a note for the teacher or the admin in order to improve the services provided by the kindergarten	2	21/04/2020	Amela Rahimi & Sindi Kalo
BR_33	The parents will be able to receive messages on WhatsApp by the admin.	According to a survey that was made in kindergarten WhatsApp has resulted the most common communication tool.	1	21/04/2020	Amela Rahimi & Sindi Kalo
BR_34	The parents will be able to receive emails by the admin.	This will be for more official updates.	2	21/04/2020	Amela Rahimi & Sindi Kalo
BR_35	The parents will be able to view the activities tab.	In this tab they will be informed about the latest activity of the kindergarten, will have the possibility to view pictures.	2	21/04/2020	Amela Rahimi & Sindi Kalo
BR_36	The parents will be able to view the information tab.	Information tab is a tab that serves as promotion page and keeps information that admin wants to make public	2	21/04/2020	Amela Rahimi & Sindi Kalo

BR_37	The parents will not be able to edit or delete the activities tab or information tab	These two pages will be only for the admin since parents can give wrong	1	21/04/2020	Amela Rahimi & Sindi Kalo
-------	--	---	---	------------	---------------------------

		information.			
BR_38	The parents will be able to see the name of the teacher of their child.	This will facilitate the communication between teacher and parent	2	21/04/2020	Amela Rahimi & Sindi Kalo
BR_39	The parents will be able to put a tick sign if they have done the monthly payment. This change will be reflected to the database of the admin	This will facilitate the admin job which will communicate to the economist	1	21/04/2020	Amela Rahimi & Sindi KAmela

BR_40	The parents will have the print option.	The print option will be available in the page of every child and parent will be able to print only the information of their child	2	21/04/2020	Amela Rahimi & Sindi Kalo
-------	---	--	---	------------	---------------------------

BR_41	The parents will be able to see the notes from the teacher.	This will facilitate their communication for special requests.		21/04/2020	Amela Rahimi & Sindi Kalo
-------	---	--	--	------------	---------------------------

BR_42	The parents will be able to see the attendance.	They will see if their child is present or not but will not be able to edit it.	2	21/04/2020	Amela Rahimi & Sindi Kalo
BR_43	The teachers will be the third user in our application system	The teacher's accessibility will be limited.	1	21/04/2020	Amela Rahimi & Sindi Kalo
BR_44	The teachers will be able to log in by username and password	This is done for security reasons to provide the right information for each teacher	2	21/04/2020	Amela Rahimi & Sindi Kalo
BR_45	The teachers will be able to see the profile picture.	This will serve as a confirmation that they are in their	2	21/04/2020	Amela Rahimi & Sindi

		profile, but they will not be able to change it.			Kalo
BR_46	The teachers will see their general information as name, surname, email, phone number.	This will serve as a confirmation that they are in their profile, but not edit it. If they will have something to edit (phone number) they will contact the admin.	2	21/04/2020	Amela Rahimi & Sindi Kalo
BR_47	The teachers will be able to see the number of the children that they have in the group.	This information is essential for them in order to manage the children of their group.	1	21/04/2020	Amela Rahimi & Sindi Kalo
BR_48	The teachers will be able to fill a ticket box if they have received the salary.	The answer of this will be connected directly to the admin to check if the salary was offered to all teachers	2	21/04/2020	Amela Rahimi & Sindi Kalo
BR_49	The teachers will be able to change the password.	They will be responsible of their own password and they can save the changes in the settings section	2	21/04/2020	Amela Rahimi & Sindi Kalo
BR_50	The teachers will be able to see the full list of the children of their group.	The list will be viewed by teachers only.	2	21/04/2020	Amela Rahimi & Sindi Kalo
BR_51	The teachers will be able to fill the attendance.	There will be two options: absent or present and they will fill it for each child	2	21/04/2020	Amela Rahimi & Sindi Kalo
BR_52	The teachers will be able to contact with parent through phone number and email	This is one of the main reasons why teachers are the third user. Facilitation in	1	21/04/2020	Amela Rahimi & Sindi Kalo

		communication with parents			
BR_53	Phone number will link directly to WhatsApp	This will be the most common communication tool.	2	21/04/2020	Amela Rahimi & Sindi Kalo
BR_54	Email will link directly to gmail.	This is thought to be the communication tool for more official news.	2	21/04/2020	Amela Rahimi & Sindi Kalo
BR_55	The teachers will be able to receive notes from parents.	Special notes from parents to teachers will link directly to the teacher's page.	2	21/04/2020	Amela Rahimi & Sindi Kalo
BR_56	The teachers will be able to write special notes for each child.	Special notes from teachers to parents will link directly to the parents's page.	2	21/04/2020	Amela Rahimi & Sindi Kalo
BR_57	The teachers will not be able to edit phone numbers, email, name, surname, or notes received.	This is the admin responsibility. The teachers only will see this database to better manage their group.	2	21/04/2020	Amela Rahimi & Sindi Kalo

BR_58	The teachers will be able to post weekly reports.	The reports will be posted weekly and there will be only one report where the teacher will summarize information about the children of the group.	2	21/04/2020	Amela Rahimi & Sindi Kalo
BR_59	The teacher will be able to see the feedback from the admin.	This will help them to improve professionally and to be aware of problems in their group.	2	21/04/2020	Amela Rahimi & Sindi Kalo

BR_60	The economist will be the fourth user in our application system	Since our system will solve and manage some economical issues also, the need of the economist was needed.	2	06/05/2020	Amela Rahimi & Sindi Kalo
BR_61	The economist will have limited access.	He will have only some information of the database of the children as the name of surname	1	06/05/2020	Amela Rahimi & Sindi Kalo

BR_62	The economist will have an account	He will have a username and a password.	1	06/05/2020	Amela Rahimi & Sindi Kalo
BR_63	The economist will have three main menus	To complete his tasks properly he will have to fill three menus.	2	06/05/2020	Amela Rahimi & Sindi Kalo
BR_64	The economist will have access to the database of the children where he will see their name and surname.	This is done to facilitate his tasks in order to assign the correct information to each child.	2	06/05/2020	Amela Rahimi & Sindi Kalo
BR_65	The economist will have to put the exact date that he will receive the payment from the parents.	In this way everything will be transparent in both sides: admin and parents	2	06/05/2020	Amela Rahimi & Sindi Kalo

BR_66	The economist must put a 'tick' sign if the payment is done and a 'X' sign if it is not done.	This is done using some symbols in order to have a clearer view.	2	06/05/2020	Amela Rahimi & Sindi Kalo
BR_67	The economist must upload the mandate of the monthly payment of the kindergarten.	This is important because the admin will see who has done the payment or not.	2	06/05/2020	Amela Rahimi & Sindi Kalo

BR_68	Economists must submit the other part of the first menu where for each child he should enter the deadline for the next payment.	Facilitates the job of the admin	2	06/05/2020	Amela Rahimi & Sindi Kalo
BR_69	Economists must fill the second menu where costs are.	Costs include: maintenance, supplies and salaries	1	06/05/2020	Amela Rahimi & Sindi Kalo
BR_70	Economists must upload the tax coupon for every transaction that he will conduct.	This is done to show transparency to the admin and also to have an overview of the total costs.	1	06/05/2020	Amela Rahimi & Sindi Kalo
BR_71	Economist must upload the excel file at the third menu where the VAT is calculated.	This is very important in order to calculate if the business should pay the taxes or not according to the law.	1	06/05/2020	Amela Rahimi & Sindi Kalo
BR_72	Economists will have the opportunity to print this information.	Since there should be recordings in managing the economical issues we think that the print bottom is needed.	2	06/05/2020	Amela Rahimi & Sindi Kalo

BR_73	The last user will be the psychologist.	Since in every kindergarten the health is very important the psychologist is needed as a user.	1	06/05/2020	Amela Rahimi & Sindi Kalo
BR_74	Psychologist will have an account.	He will have access via a username and a password.	1	06/05/2020	Amela Rahimi & Sindi Kalo
BR_75	The psychologist will have the database of	This will facilitate their work to write	1	06/05/2020	Amela Rahimi &

	the children with their name and surname.	notes to the right child.			Sindi Kalo
BR_76	The psychologist will have to write a weekly note to every child.	This way every child will have a weekly report of their health.	2	06/05/2020	Amela Rahimi & Sindi Kalo

BR_77	The psychologist will have the option to send the notes for each child to the respective parent.	Parents will be continuously informed about the health of their child.	2	06/05/2020	Amela Rahimi & Sindi Kalo
BR_78	The psychologist will have the opportunity to print this information.	If the admin wants to have folders and to make reviews the print button will help.	2	06/05/2020	Amela Rahimi & Sindi Kalo

3.2 Non-Functional Requirements

3.2.1 Product Requirements

3.2.1.1 User Interface Requirements

The first element that appears when the user accesses the software is the log in page. He must enter the username and the password in order to log in as user. In case the password or the username is not correct the error message will show up saying that one or them or both are incorrect. If they are both correct then he may proceed and log in. After the user logs in the first page he can see is "Welcome to ABC". In this page a menu with 4 elements will show in his right, where he can access, all customers, Info page, Activities or Employees. The All Customers when clicked opens the database of all the children registered in the kindergarten. The item Info, will redirect you to all the photos of the kindergarten and information about it, even the contact inside the business. Then the user is redirected to a promotion page if he clicks at Activities. When they click it opens a new page with different activities of the kindergarten. And lastly the Employees which redirects at the database of the employees of the business and their information. At the page of the All Customers in the right will be the database table with all the gender, names and surnames of the children and if you double click in one of the names it will show the picture of them with other information like their address and their parents names, contacts, the date of the registration, who is their teacher at the kindergarten and if they have

paid the monthly payment. The email links directly at the email page while the phone number will link directly at the WhatsApp. At the Activities page you can access photos updated from the user, admin of the software and kindergarten, they will have a description below and also a calendar will show up if you click for more info in the photo which shows the dates when the activities have been done. There is an Edit button in case you want to edit the calendar and add, edit, delete certain dates. And in the Employees Page you can access the table with all the gender, name and surnames of employees of the business. There will show a picture of the person, their other information, address, phone number, email and monthly salary. Their start and end date of employment is shown up. As in customers phone number and email link one to WhatsApp and the other to email. Also if they have been awarded as the Employee of Month it will show there too.

Since we will offer the service for also the employee and the parents, they will see different pages and have other services offered when logged in. The employees can access the home page where there will be shown a menu in case he wants to access the attendance and other information about children page or the reports page where each teacher will report regarding their respective children they have in supervision.

And the parents page will only be provided information page, called the home page where he can view information for their children based on the reports of the teachers and also information about their payment due date or status.

3.2.1.2 Usability

User-friendly

- It is efficient to use from the user side.
- The user is able to update data while using and edit the previous data or delete.
- The user can learn in a fast time the system.

Iterative Design

- The software should be based on a system that tests analyze and refine a products or service.
- Changes on the design can be made all the time to improve functionality and design.
- There can be various models for the same system so when there are problems empirical methods can help to solve the problem.
- Employees can log in with their accounts and access data or update them.
- Parents can access with their respective accounts and access data about their children.

Accessibility

The software is a web application, so it is accessible whenever the user has a internet connection via WIFI or mobile network.

Responsiveness

One of our aims is to make our application responsive in the visible part, in the design but also in the way it generates data and information, in the way it functions.

Flexibility

- Since the users have no IT knowledge or at least most of them, the application should be easy to be accessed and used. The employees and the administrator can update data all the time, while the parents can access them in a short time and with a small number of steps.

- The application it is predicted to manage and correct the errors in a short time, in this way it can't cause any problems in use.

Effectiveness

- As we said, it is easy to use, learn and understand.
- For the kindergarten employees and the administrator we will provide the service to go there and show how the application works, and if they have questions we may include a WORD document where each step and option is explained and also they way how to use them.
- In case they have a error during the use, an error message will show up and they can re-do the action or even contact our group tester for a more extended study of the problem.

Efficiency

- The web application should be efficient, so it can solve the technical issues the kindergarten is facing, making most of their procedures easier and shorter in time.
- The application itself should be easy to use from the users, every button and option is understandable and also the error messages can help.

3.2.1.3 Efficiency

3.2.1.3.1 Performance Requirements

- ABC is a web based application. One of the main factors to affect the performance of it, is the internet connection. It is also important the hardware performance of the device you are using and of course the process of obtaining data from the database.
- The better the internet connection the faster the service provided. If your device has large speed internet even multiple users from the same internet provider can be supported. Also the specifics of the device are important like the CPU.
- It is better if your device offers a bigger memory space. Somehow the bigger storage can provide service to multiple users.
- But we will make sure that even if the internet connection is not the fastest, still the service is provided so a number of different devices and internet connection are taken into consideration while building the web application.
- **Static numerical requirements**-We have three different types of users, the admin of the kindergarten, the employees (teachers) and parents.. The information the page will held is static too, the menu offers only four elements, the database of the children, the database of the employees, the page with the information mainly descriptive data but photos may be included and another page with activities data, calendar element and photos of activities. So 4 main functions. Our application is web based and can be accessed via internet. For the employees page it shows different options like home page, reports and attendance page. For the parents it shows the home page and within it all the information provided to the parents.
- 90% of the redirecting to one of the four pages is done in less than 5 seconds.
- The accessing of the user, log in is done in under 10 seconds.

- **Dynamic numerical requirements-** All data except the way pages will be previewed according to the static requirements above is dynamic. The databases itself are dynamic, they can be edited, you can add children or employees, delete them. Also all information is activities is updated from time to time, the calendar too so all the data in the software inside these 4 pages can be changed. Also there are money values, the monthly payment of the children and the salary of the employees which can be changed from time to time depending on the person.
- The log in is done in under than 10 seconds.
- The update of the tables, 98% of it is done under 3 seconds.
- The update of the calendar is done under 5 seconds.
- The edit 95% of it is done in under than 10 seconds(including the saving process)

3.2.1.3.2 Space Requirement

- Expected number of users is at least 100 at the launch of the software. But it is supposed to support up to 300 of users at the same time , if the number of active users increase like the kindergarten has more employees or customers. The database also can save data for all the registered users with no problem.
- The maximum simultaneous user load:100
- Memory requirements: 2-3GB RAM.
- Expected throughput: One user can request one service at a time, the system can only handle 50 requests at a second.

3.2.1.4 Dependability

Availability

- The application is available 24 hours a day, 7 days a week, accessible anytime.
- Geographical area- even though employees and customers are from Tirana it can be accessed from everywhere, in case they travel somewhere and still want access.
- If the users have internet connection, they can operate in the system.

Reliability

- Larger storage the better the opportunity to include and support a lot of data. If for example 300 users can use the system , 8 GB of RAM is available so the system operates fast and avoiding big errors and problems.
- We have predicted that the failure rate for one month would be for users 1.5% and for the server around 1.7% but we will work on lowering it.
- To support growing number of users, customers or the employees the beginning storage can support up to 200GB SSD.

Monitoring

- The server gets the user request via HTTP at the best amount of time (fastest).
- Server also tracks of every user activity and request, anytime they log in during the month and request a service so for any increase in number of user requests he is ready.

Maintenance

- The software will be updated mostly for the errors the users can have during the use of it but even for other specific options they might request.
- In case an error happens in the service requested an error message will show up, if the data is not available or the service at the moment, and it can include a specific solution or may redirect the user at the home page.

Integrity

- Every user account, no matter if the staff or the customer is integrity safe and is only information property of the kindergarten.
- All the data mentioned, collected used in the application is for educational purposes and within the kindergarten regulation and won't be misused.
- The administrator of the kindergarten and the software is responsible for every information and data within the database and server
- Every user will only share the information in their account with the administrator of the kindergarten staff and vice versa the staff only shares information about their children with respective parent.

3.2.1.5 Security

- Every log in of the users is done via b-encryption standard of account configuration and information safety.
- The database is only in the use of the kindergarten and only accessible to them.

3.2.2 Organizational Requirements

3.2.2.1 Environmental Requirements

This software build up in a web application will be both efficient and effective on its use, helping both the kindergarten and parent to access data and reduce the mostly the time it takes to search through papers for children or for parent who might be working to stay and ask each day for their kids.

Floor Space: In the environment of the kindergarten a small room dedicated to the employees is facilitated with computers so they can access the web application.

Power Supply: The power is provided from the power cable infrastructure of the kindergarten where they receive all the power.

Internet Connection: The kindergarten infrastructure is modern and teachers will be provided free internet connection within their working hours to access the software.

3.2.2.2 Operational Requirements

The ABC software is an web application that will provide better communication between the administrator of the ABC kindergarten in Tirana and their staff job. Also it will help a lot with the communication between parents and their kids teacher. The administrator who manages even in real life the kindergarten will be the only one to update, add and delete data. But comments, notes and reports will be made from teacher, so everyday the same thing they did by writing in a paper or talking individually to each parent after class they will do it through the platform. Also parent will have it a lot easier to access all this information through just one log in on the internet.

Operations:

Administrator-CRUD privileges

System Interface/Integration

Database – Plesk Database

Web Based

G-Suite

Plesk

SSL certificate

There will be 2 type of notifications sent by admin to customers, First Gmail format and Second WhatsApp format, where notifications can be received in any device if Gmail and WhatsApp applications are installed.

3.2.2.3 Development Requirements

a. Client-Side Programming (Front-end)

Technologies to be used in the client-side web development, everything the user is going to see on their screen:

- JavaScript- to make pages more interactive.
- Bootstrap-CSS framework and JavaScript templates for forms , buttons, navigation or other interface.
- JSON-data changer format to write and read data.

.

b. Server-Side Programming (Back-end)

- Programming Language: PHP.
- To store the data: MySQL database.

3.2.3 External Requirements

3.2.3.1 Regulatory Requirements

The ABC software will operate under the educational private institution for children under the state of Albania. Privacy policies are adapted from the ABC kindergarten in accordance with the

law in Albania with the provisions of the law “On the protection of personal data” and the related sub-legal acts. It protects all the data that will be collected for kids under age and their familiars but for the employees too. They grant that this data and information is on the kindergarten use for a good use. The session of the user log in is tracked and if someone tries to steal his authenticity there will be easier to track that is wasn’t the administrator of the kindergarten.

All the information provided from the parents and employees is secured and never used for selling or traded to people outside the organization.

The parents and employees are in accordance that their information is saved in a database and can be used all the time they are part of the educational institution. The only cases the administrator is enforced to share the information is when courts orders to do so or other regulatory authorities of the state.

At the stated time no accounting requirements will be used since the software until now is used only to track data and specific information but no financial statements and other balance sheets. In case something changes this part of the document will be updated.

Every tracking of information is done under the rule Albania has undertaken regarding personal data and security laws from European Union.

3.2.3.2 Ethical Requirements

Users have agreed to share their personal information within the contract and used only for lawful motives. The information they will share is their names and surnames, their personal email address and their phone numbers and their address. No other educational institute will have the right to ask for this information or any other business or organization.

ABC provides to third parties personally-identifiable information of users to this web application if these rules apply:

- If the users agree to share this information.
- If there is an authorization to the administrator of the kindergarten previously stating that this information could be shared in cases when a court orders or it is due to a regulatory authority.

3.2.3.3 Legislative Requirements

3.2.3.3.1 Accounting Requirements

Taking into consideration the nature of the web application , it should be stated that at this moment our software has no accounting requirements. But in case something changes and the software has other purposes , the requirements will be updated with the changes.

3.2.3.3.2 Security Requirements

The user in our case is the administrator itself, he doesn’t need to encrypt the password from itself but using encryption the test can create privacy for the user.

The databases both the employee table and the customer, is only accessible to the administrator and only he can access, change and edit the information. The CRUD functionalities are performed on the data.

The tester also will be taking care of any security bugs about the databases since the administrator itself is not specialist.

Authorization and Authentication

Single-Factor Authentication- is the method we will be using. Since we have a limited number of users, only requesting him a password is enough to grant security. It only asks for his credentials to verify his identity.

After authentication is done, the credentials are recognized from the software authorization will happen. You are authorized access to all the data, not only to access them and visualize as user but change and update the information and even delete. Full authentication is granted to the user.

We can use Pubcookie to create direct relation between the user and the server. Pubcookie will verify his credentials and also a cookie is provided to the user to save all his functions within the system. It will be used for enforcing authentication process.

3.3 Domain Requirements

ABC is a Windows software in a kindergarten business in Albania. Its aim is to come to help to the kindergarten administrator in order to have more control over data and make her job easier. But the security of the data is the most important issues. A lot of personal information regarding under-age kids and their parent, and the kindergarten employees is included in the tables of database of the software and we have to be careful in order to not have misconduct. The software is only accessible from one user, and this makes it easier to control the data. It is private software so no outsider will have direct relation with it and doesn't depend on another server, like the server of ministry of education in Albania. A stable internet connection is requested from the kindergarten facilities anyway.

4. User Scenarios/Use Cases

Provide a summary of the major functions that the product will perform. Organize the functions to be understandable to the customer or a first time reader. Include use cases and business scenarios, or provide a link to a separate document (or documents). A business scenario:

4.1

1. Login is successful

1.1 Administrator

- a. The administrator logs in with their credentials, username/username and password.
- b. If the username and password are found correctly in the dedicated database of users.
- c. The administrator is redirected to the first page/ home page of the system

1.2 Employee

- a. The employee logs in with their credentials too, registered email and password.
- b. The database table dedicated to users/employees retrieves the credentials.
- c. The employee is redirected at the home page of the system.

1.3 Parent

- a. Parent logins with their username or email.
- b. He types the password he has registered the account.
- c. In the database is done the right matching of the credentials.
- d. The user is redirected at the home page.

1.4 Economist/Accountant

- a. Economist logs in with their username or email and password.
- b. He enters the password he has for the account.
- c. Database accepts the credentials.
- d. The user is redirected at the home page.

1.5 Psychologist

- a. Psychologist logs in with their username or email and password.
- b. He enters the password he has for the account.
- c. Database accepts the credentials.
- d. The user is redirected at the home page.

2. Login Failed

2.1 Administrator

- a. The administrator logins with the registered email.
- b. The credentials not found in the database, the login is unsuccessful.
- c. An error message is shown if the credentials are incorrect.
- d. He remains in the same page.

2.2 Employee

- a. He enters his credentials to log in username and password.
- b. The credentials are not the same as in the user database table.
- c. Log in unsuccessful, error message is shown to the user.
- d. He is not redirected, remains at the login page.

2.3 Parent

- a. The user enters his credentials, email/username and password.
- b. The credentials are incorrect, not found and matched with database.
- c. Log in incorrect and error message is shown.
- d. The user remains at the log in page.

2.4 Economist/ Accountant

- a. The user enters his credentials, email/username and password.
- b. The credentials are incorrect, not found and matched with database.
- c. Log in incorrect and error message is shown.
- d. The user remains at the log in page.

2.5 Psychologist

- a. The user enters her credentials, email/username and password.
- b. The credentials are incorrect, not found and matched with database.
- c. Log in incorrect and error message is shown.
- d. The user remains at the log in page.

3. User update profile

3.1 Employee update

- a. Employee will have the option to request an update of the profile and a box to complete with the specific request.
- b. Request is received from admin.
- c. Admin decides if he wants to do the update of the profile and if yes updates.
- d. Employee profile is updated.

3.2 Parent update

- a. Parent will have the option to request an update of the profile and a box to complete with the specific request.
- b. Request is received from admin.
- c. Admin decides if he wants to do the update of the profile and if yes updates.
- d. Parent profile is updated.

3.3 Admin update request

- a. Admin received an update request from employee/parent/economist/psychologist.
- b. He does the needed update to the profile.
- c. He notifies the employee/parent/economist/psychologist that the update of the profile is done.

4. Admin-Home Page

- a. Admin logs in and is redirected at the home page and four options are available.

- b. Admin click at one of the four options: All Costumers, Info, Activities and Employees.
- c. Admin is redirected at the requested page and navigates through it.

4.1 Admin- All costumers

- a. Admin is redirected at All Costumers page.
- b. Admin navigates through all the page and can find every costumer listed and their specific information
- c. Admin can add new costumer, delete costumer and update costumer.
- d. For each costumer he can email and call them.

4.2 Admin- Info

- a. Admin is redirected at Info page of system.
- b. At info page he can access photos and information of kindergarten.
- c. He can add, delete photos and information.

4.2.1 Add Info

- a. Admin can Add Info at the top right of the page via the plus sign.
- b. After he clicks the sign he is redirected at another page to complete the Info Form.
- c. After done he can click Save or Cancel.

4.2.1.1 Add Info is Successful

- a. After clicking Save admin is redirected at Info Page.
- b. The info is added at the Info Page.

4.2.1.2 Add Info is Unsuccessful

- a. After clicking Save , error message "Something went wrong, try again" is shown.
- b. He is not redirected, adding not done.

4.2.2 Delete Info

- a. Admin can Delete Info beside every information at Info Page.
- b. After he clicks Delete a table is shown.
- c. After done he can click Delete or Cancel.

4.2.2.1 Delete Info is Successful

- a. After clicking Delete admin is redirected at Info Page.
- b. The info is deleted from the Info Page.

4.2.2.2 Delete Info is Unsuccessful

- a. After clicking Delete , error message "Something went wrong, try again" is shown.
- b. He is not redirected, deletion not done.

4.2.3 Edit Info

- a. Admin can Edit Info beside every information at Info Page.
- b. After he clicks Edit he is redirected at another page to complete the Info Form.
- c. After done he can click Save or Cancel.

4.2.3.1 Edit Info is Successful

- a. After clicking Save admin is redirected at Info Page.
- b. The info is edited at the Info Page.

4.2.3.2 Edit Info is Unsuccessful

- a. After clicking Edit, error message "Something went wrong, try again" is shown.
- b. He is not redirected, edition not done.

4.3 Admin- Activities

- a. Admin is redirected at the Activities page.
- b. He now can access all the activities of the kindergarten, add, delete or edit them.
- c. He there can access the activities calendar.

4.3.1 Add Activities

- a. Admin is redirected at Activities page.
- b. At the bottom right at the plus sign he can add activities.
- c. He clicks the sign to add new activity.
- d. A form is shown to fill the activity information.
- e. He can Save or Cancel.

4.3.1.1 Add Activity is Successful

- a. After clicking Save admin is redirected at Activities Page.
- b. The info is added at the Activities Page.

4.3.1.2 Add Activity is Unsuccessful

- a. After clicking Save, error message "Something went wrong, try again" is shown.
- b. He is not redirected, addition not done.

4.3.2 Delete Activity

- a. Admin can Delete Activities beside every activity at Activities Page.
- b. After he clicks Delete a table is shown.
- c. After done he can click Delete or Cancel.

4.3.2.1 Delete Activity is Successful

- a. After clicking Delete admin is redirected at Activities Page.
- b. The info is deleted from the Activities Page.

4.3.2.2 Delete Activity is Unsuccessful

- a. After clicking Delete , error message "Something went wrong, try again" is shown.
- b. He is not redirected, deletion not done.

4.3.3 Edit Activity

- a. Admin can Edit Activity beside every activity at Activities Page.
- b. After he clicks Edit he is redirected at another page to complete the Activity Form.
- c. After done he can click Save or Cancel.

4.3.3.1 Edit Activity is Successful

- a. After clicking Save admin is redirected at Activities Page.
- b. The info is edited at the Activities Page.

4.3.3.2 Edit Activity is Unsuccessful

- a. After clicking Edit, error message "Something went wrong, try again" is shown.
- b. He is not redirected, edition not done.

4.4 Admin-Employees

- a. Admin is redirected at the Employee page.
- b. Admin navigates through all the page and can find every employee listed and their specific information.
- c. Admin can add new employee, delete employee or update employee.
- d. For each employee he can email and call them.

4.4.1. Admin-Add Employees

- a. Admin is logged in their account.
- b. He goes to Employees Table.
- c. At the end of the table a button "Add new Employee".
- d. Click the button to add new employee.

4.4.1.1 Add is Successful

- a. After he clicks Add a form is shown to fill information.
- b. Fill the form with the needed information.
- c. Save to add new employee.
- d. The new employee is shown at the Employees Table.

4.4.1.2 Add is Unsuccessful

- a. After he clicks Add a form is shown to fill information.
- b. Fill the form with the needed information.
- c. Save to add new employee.
- d. Addition is not done, error message is shown "Something went wrong, try again"

4.4.2. Admin-Delete Employees

- a. Admin is logged in their account.
- b. He goes to Employees Table.
- c. Beside Employee name he clicks Delete.

4.4.2.1 Delete is Successful

- a. After he clicks Delete a table asking if he is sure is shown up.
- b. Click Yes or Cancel.
- c. If yes, the page reloads and shows the employee is deleted.
- d. If no, the page goes to Employees Table again.

4.4.2.2 Delete is Unsuccessful

- a. After he clicks Delete a table asking if he is sure is shown up.
- b. Click Yes or Cancel.
- c. If yes, the page reloads but shows error message "Something went wrong, try again"
- d. Deletion not done.

4.4.3. Admin-Edit Employees

- a. Admin is logged in their account.
- b. He goes to Employees Table.
- c. Beside Employee name he clicks Edit.

4.4.3.1 Edit is Successful

- a. After he clicks Edit the registration form is shown up.
- b. He can edit every element of the form.
- c. After edition he clicks save at the end or cancel.
- d. If Save the edit is saved and after reload information is changed.
- e. If Cancel it takes him back to Employee Table,

4.4.3.2 Edit is Unsuccessful

- a. After he clicks Edit the registration form is shown up.
- b. He can edit every element of the form.
- c. After edition he clicks save at the end or cancel.
- d. Clicks Save, error message is shown "Something went wrong, try again"

4.4.4. Admin-Add Customer

- a. Admin is logged in their account.
- b. He goes to Customers Table.
- c. At the end of the table a button "Add new Customer".
- d. Click the button to add new customer.

4.4.4.1 Add is Successful

- a. After he clicks Add a form is shown to fill information.
- b. Fill the form with the needed information.
- c. Save to add new customer.
- d. The new customer is shown at the Customers Table.

4.4.4.2 Add is Unsuccessful

- a. After he clicks Add a form is shown to fill information.
- b. Fill the form with the needed information.
- c. Save to add new customer.
- d. Addition is not done, error message is shown "Something went wrong, try again"

4.4.5. Admin-Delete Customer

- a. Admin is logged in their account.
- b. He goes to Customers Table.
- c. Beside Customer name he clicks Delete.

4.4.5.1 Delete is Successful

- a. After he clicks Delete a table asking if he is sure is shown up.
- b. Click Yes or Cancel.
- c. If yes, the page reloads and shows the customer is deleted.
- d. If no, the page goes to Customers Table again.

4.4.5.2 Delete is Unsuccessful

- a. After he clicks Delete a table asking if he is sure is shown up.
- b. Click Yes or Cancel.
- c. If yes, the page reloads but shows error message "Something went wrong, try again"
- d. Deletion not done.

4.4.6. Admin-Edit Customer

- a. Admin is logged in their account.
- b. He goes to Customers Table.
- c. Beside Customer name he clicks Edit.

4.4.6.1 Edit is Successful

- a. After he clicks Edit the registration form is shown up.
- b. He can edit every element of the form.
- c. After edition he clicks save at the end or cancel.
- d. If Save the edit is saved and after reload information is changed.
- e. If Cancel it takes him back to Customers Table,

4.4.6.2 Edit is Unsuccessful

- a. After he clicks Edit the registration form is shown up.
- b. He can edit every element of the form.
- c. After edition he clicks save at the end or cancel.
- d. Clicks Save, error message is shown "Something went wrong, try again"

4.7. Email

4.7.1 Email Employees

- a. Administrator goes at Employee Table.
- b. Beside every employee email sign is shown.
- c. Click Email and the email form is shown up.
- d. Complete email and press Send.

4.7.1.1 Email Employees is Successful

- a. If press send and the email form is gone, email is successful.
- b. Not redirected, stays at the same page.

4.7.1.2 Email Employees is Unsuccessful

- a. If press sends, error message "Something went wrong, try again", email is unsuccessful.
- b. Not redirected, stays at the same page.

4.7.2 Email Customer

- a. Administrator goes at Customer Table.
- b. Beside every customer email sign is shown.
- c. Click Email and the email form is shown up.
- d. Complete email and press Send.

4.7.2.1 Email Customer is Successful

- a. If press send and the email form is gone, email is successful.
- b. Not redirected, stays at the same page.

4.7.2.2 Email Customer is Unsuccessful

- a. If press sends, error message "Something went wrong, try again", email is unsuccessful.
- b. Not redirected, stays at the same page.

4.8. Check Teacher Report

- a. Administrator is logged into their account.
- b. He goes at Employees Table.
- c. He click at employees , named as teachers and is redirected at their profile.
- d. At each profile he can find a folder named Reports.
- e. For each of the teacher's child the report is given.
- f. He can check the given report in PDF.

4.8.1 Download Report

- a. Administrator is logged into their account.
- b. He goes at teacher's profile.
- c. He clicks at Reports folder.
- d. Beside every child name the report is found.
- e. He clicks download to download the PDF report.

4.9. Check Payment/Salary

- a. Admin is logged into their account.
- b. He goes at Employees Table or Customer Table.
- c. He click at every profile to check.
- d. At every profile it shows in green if salary is given or payment from customer is done.
- e. If not it says "Missing"

5. Parent- Home Page

- a. Parent logs in and is redirected at the home page.
- b. The can select between activities page and information page.

5.1 Parent-Activities

- a. Parent is redirected to activities where he can only search for activities.
- b.. Parent is offered a search button and he can search with name of activities or date.
- c. After he search the related activities show.

5.2 Get Daily Reports

- a. Parent is redirected at information page where he looks after their kids.
- b. Parent can view Daily Report in web or download it via download button.
- c. They can access attendance table.
- d. They can also see comments from the teacher.
- e. Parent can download report for their children written from the teacher.

5.3 Get Improvement Evaluation

- a. Parent is logged into their account.
- b. Parent is redirected at information page where he looks after their kids.
- c. They can access beside their name Improvement Evaluation upload from the psychologist.
- d. They can view or download this report.

5.3.1 Give Feedback

- a. Parent is logged into their account.
- b. He goes at Information page for their children.
- c. He clicks at Daily Report.
- d. At the end of the page a comment section is given.
- e. He writes in the comment section the feedback.
- d. He clicks save or cancel.

5.3.1.1 Give Feedback is Successful

- a. Parent is logged into their account.
- b. At information page, Daily report he writes feedback.
- c. He clicks Save and it redirected at Information Page if successful.

5.3.1.2 Give Feedback is Unsuccessful

- a. Parent is logged into their account.
- b. At information page, Daily report he writes feedback.
- c. He clicks Save, it shows error message : "Something went wrong, try again".
- d. He is not redirected.

5.4. Check Monthly Payment Status.

- a. Parent is logged into their account.
- b. At Information Page it shows, a warning/notification: "Payment is due".
- c. Parent is notified for the payment status at least 7 days before the end of the month.

5.4.1 Payment is not done

- a. Parent is logged into their account.
- b. At Information Page, it shows Missing, last payment if the month has passed and payment not done.

5.4.2 Payment is done

- a. Parent is logged into their account.
- b. At Information Page, it shows Done in green, last payment for the last month is done.

6. Teacher.

- a. Teacher logs in and is redirected at the home page.
- b. They can select between activities page, daily reports and attendance.

6.1 Teacher Home Page

- a. Teacher is redirected at home page where they find information about themselves.
- b. They can track their payment status in this page.

6.1.1 Payment is given

- a. Teacher is logged into their account and redirected at the home page.
- b. If Salary is in green saying given, the monthly payment is done.

6.1.2 Payment not given.

- a. Teacher is logged into their account and redirected at the home page.
- b. If Salary is in red saying missing, the monthly payment is not given.

6.2 Activities Page

- a. Teacher is logged into their account.
- b. He can click on activities page and is redirected.
- c. At activities page he can access activities.

6.2.1 Add Activities

- a. Teacher is redirected at Activities page.
- b. At the bottom right at the plus sign he can add activities.
- c. He clicks the sign to add new activity.
- d. A form is shown to fill the activity information.
- e. He can Save or Cancel.

6.2.1.1 Add Activity is Successful

- a. After clicking Save teacher is redirected at Activities Page.
- b. The info is added at the Activities Page.

6.2.1.2 Add Activity is Unsuccessful

- a. After clicking Save, error message "Something went wrong, try again" is shown.
- b. He is not redirected, addition not done.

6.2.2 Delete Activity

- a. Teacher can Delete Activities beside every activity at Activities Page.
- b. After he clicks Delete a table is shown.
- c. After done he can click Delete or Cancel.

6.2.2.1 Delete Activity is Successful

- a. After clicking Delete teacher is redirected at Activities Page.
- b. The info is deleted from the Activities Page.

6.2.2.2 Delete Activity is Unsuccessful

- a. After clicking Delete, error message "Something went wrong, try again" is shown.
- b. He is not redirected, deletion not done.

6.2.3 Edit Activity

- a. Teacher can Edit Activity beside every activity at Activities Page.
- b. After he clicks Edit he is redirected at another page to complete the Activity Form.
- c. After done he can click Save or Cancel.

6.2.3.1 Edit Activity is Successful

- a. After clicking Save teacher is redirected at Activities Page.
- b. The info is edited at the Activities Page.

6.2.3.2 Edit Activity is Unsuccessful

- a. After clicking Edit, error message "Something went wrong, try again" is shown.
- b. He is not redirected, edition not done.

6.3 Daily Reports

- a. Teacher is logged into their account.
- b. Teacher clicks at Daily Reports.
- c. Teacher is redirected at daily reports.

6.3.1 Add Daily report

- a. Teacher is logged into their account.
- b. Teacher is at Daily Report.
- c. At the top right he clicks the plus sign to add new report.
- d. The report form is shown and he completed.
- e. He clicks Save or Cancel.

6.3.1.1. Add Daily report is successful

- a. Teacher is logged into their account.
- b. Teacher is adding new daily report at Daily Reports.
- c. He clicks Save at the end of form.
- d. He is redirected at Daily reports, new report is added.

6.3.1.2 Add Daily report is unsuccessful

- a. Teacher is logged into their account.
- b. Teacher is adding new daily report at Daily Reports.
- c. He clicks Save at the end of the form.
- d. Error message is shown: "Something went wrong, try again".
- e. He is not redirected at Daily reports.

- c. Then the new activity is listed the last one and he can click to see description and photos.

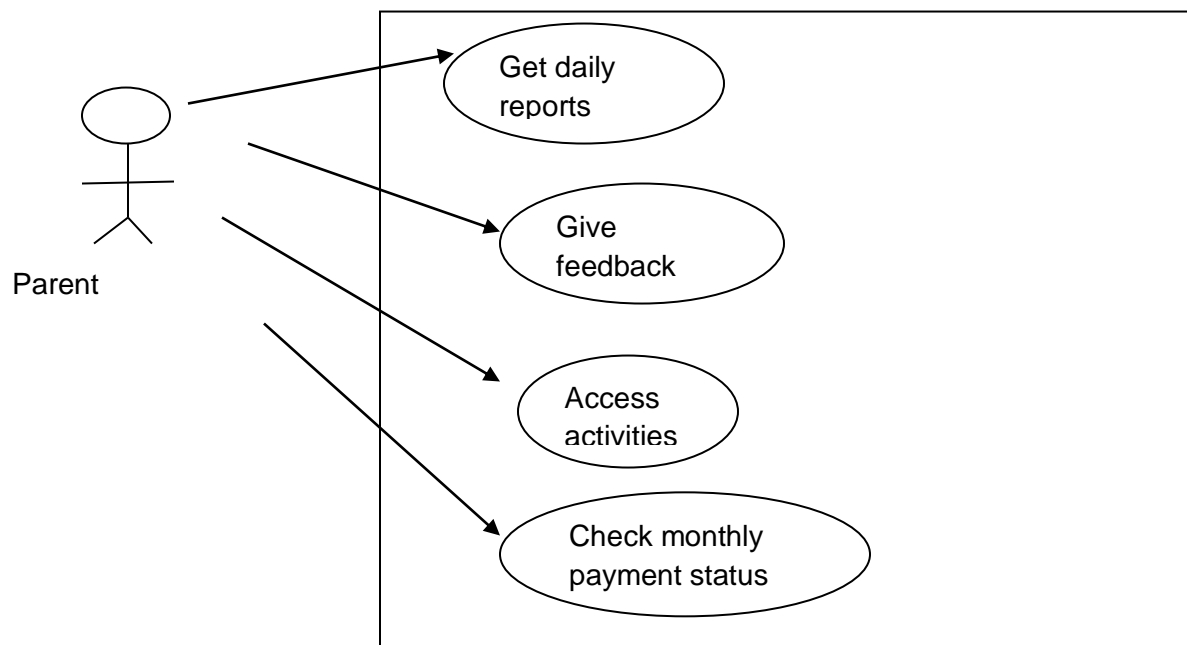

Use Case 1: Administrator

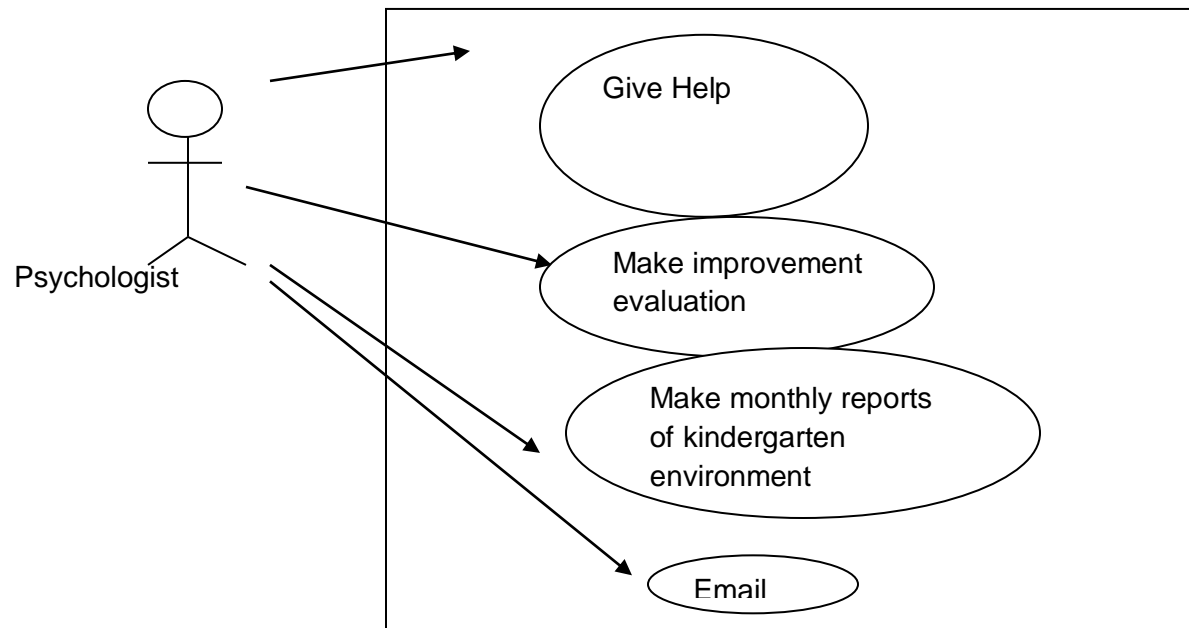

Use Case 2: Employee (Teachers)

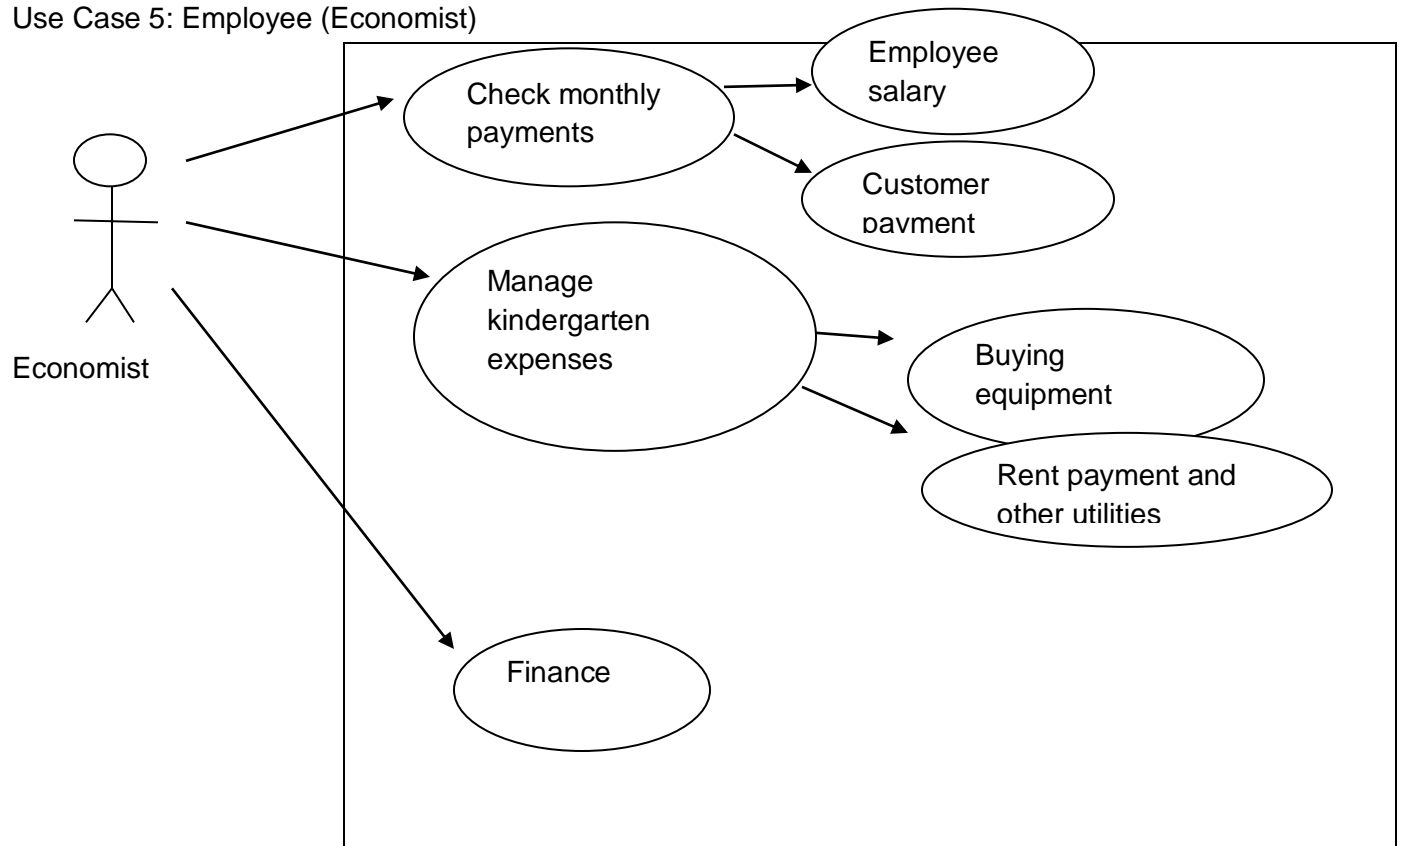

Use Case 3: Customer (Parent)

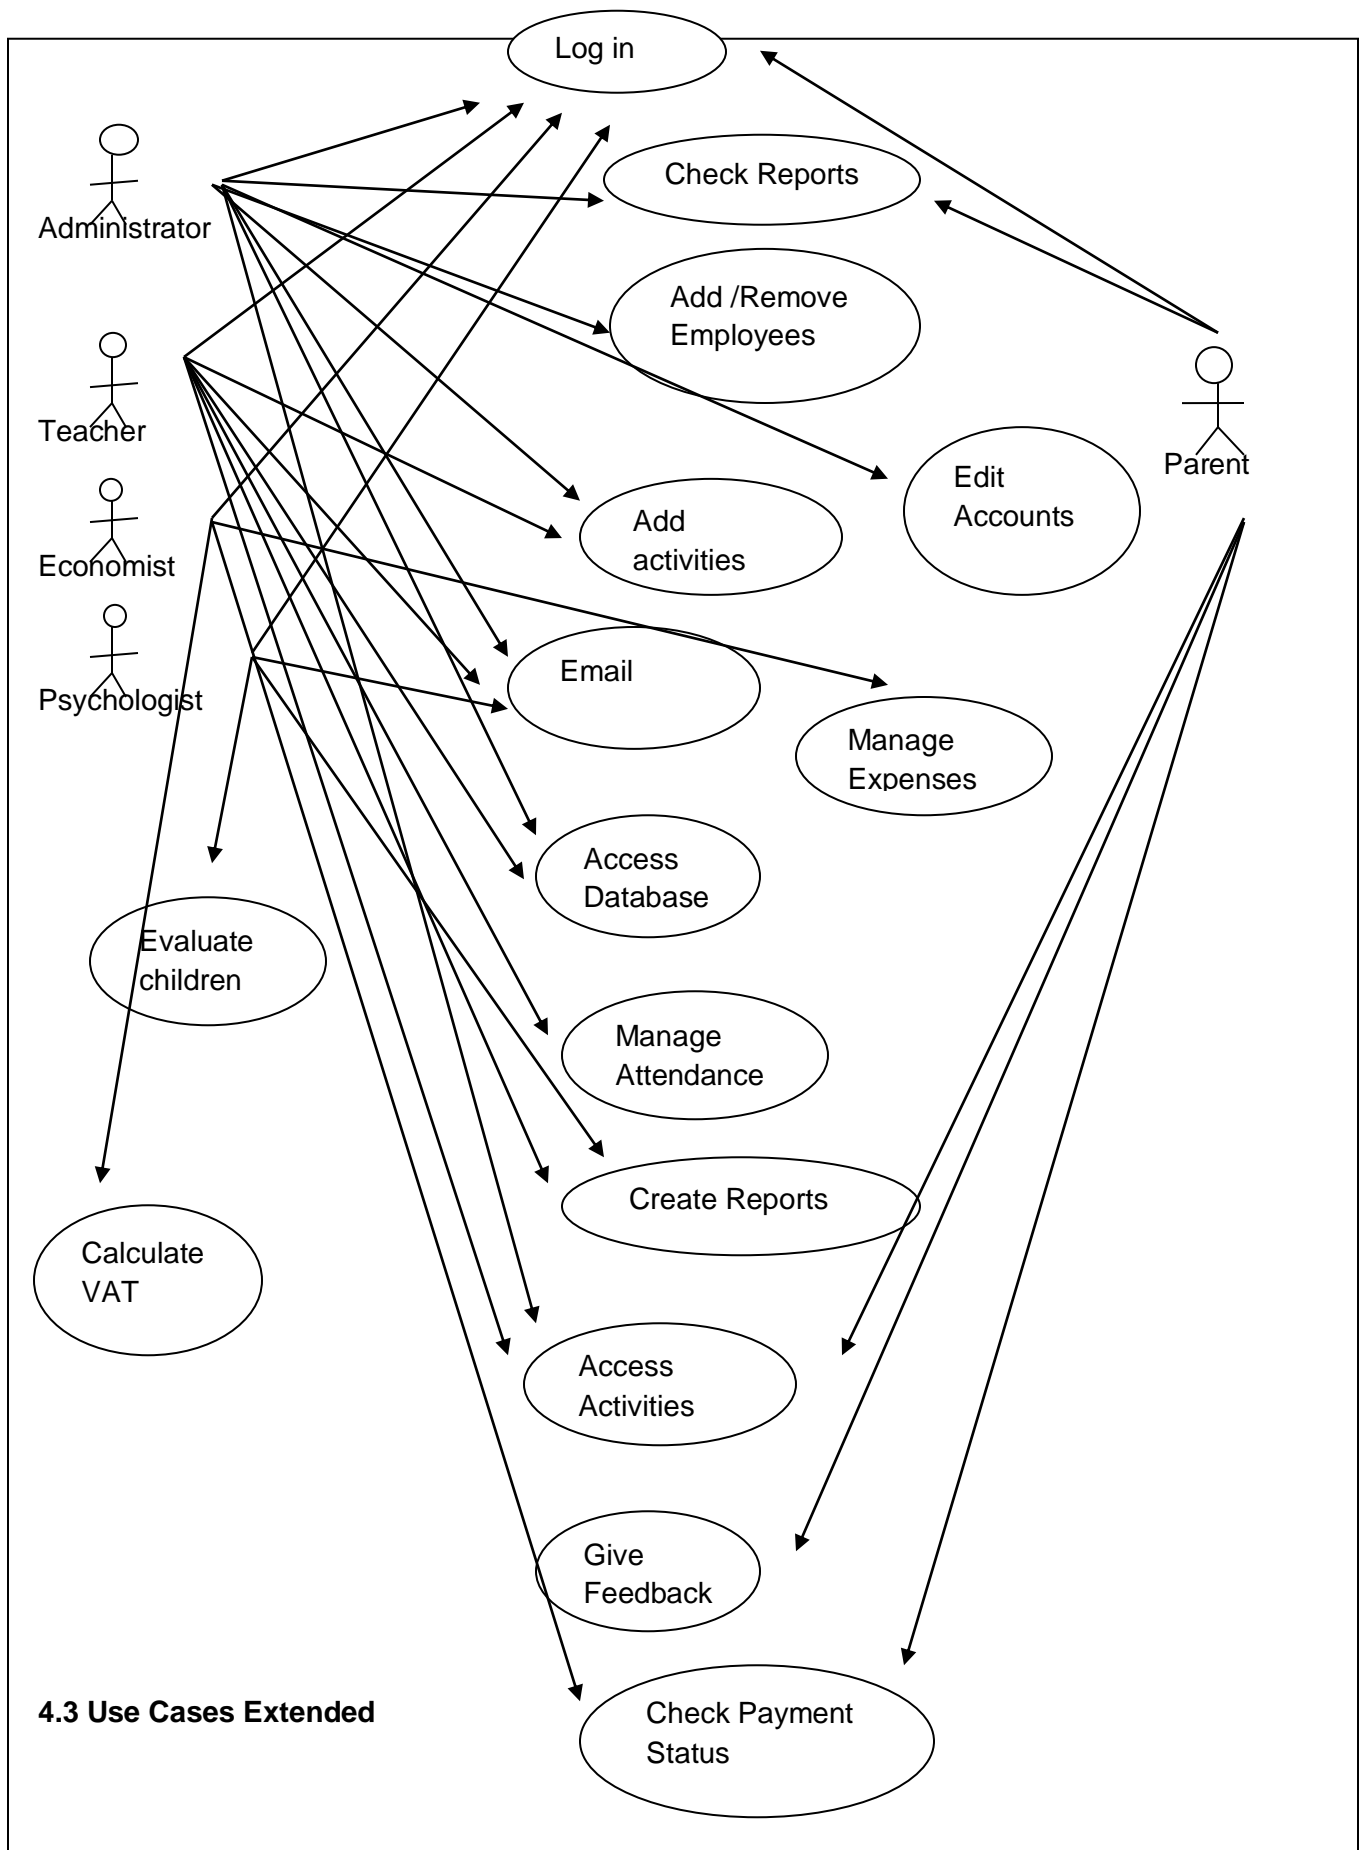

Use Case 4: Employee (Psychologist)

Use Case 5: Employee (Economist)

Use Case 6: General

Use Case (UC_1.1)	Add/Delete/Update new customer
Scope:	ABC Education (Kindergarten Management)
Level:	User Level
Intention Content:	To register/delete new children in the system and update the others.
Minimum Guarantees:	The information is registered on the database.
Success Guarantees:	The information is shown in the app.
Primary Actor:	Administrator
Stakeholder's Interest:	To have registered every child with their proper details.
Pre-condition:	Admin is logged in the system.

Use Case (UC_1.2)	Add/Delete/Update Information
Scope:	ABC Education (Kindergarten Management)
Level:	User Level
Intention Content:	To add and delete information about the kindergarten according to the situation.
Minimum Guarantees:	The information is written properly on the page.
Success Guarantees:	The new/ deleted (updated) information is saved on the page.
Primary Actor:	Admin
Stakeholder's Interest:	To keep all the parties informed.
Pre-condition:	Admin is logged in the system.

Use Case (UC_1.3)	Add/Delete/Update Activities
Scope:	ABC Education (Kindergarten Management)
Level:	User Level

Intention Content:	To add /delete activities about the kindergarten according to the activities timetable.
Minimum Guarantees:	The activities are updated.
Success Guarantees:	Activities are shown and the parents and all interested parties get informed about them.
Primary Actor:	Admin
Stakeholder's Interest:	Parents/teachers etc are clear about the activities.
Pre-condition:	Admin is logged in the system and other parties are logged in in order to access the information.

Use Case (UC_1.4)	Add/Delete/Update Employees
Scope:	ABC Education (Kindergarten Management)
Level:	User Level
Intention Content:	To have all the needed information about the teachers that are currently working in the kindergarten.
Minimum Guarantees:	The employees are all registered.

Stakeholder's Interest:	To have all the detailed information about the teachers since they are the only ones who have direct contact with parents and also children.
Pre-condition:	Admin is logged in the system and other parties are logged in in order to access the information.

Use case 1.5	create quick note for every employee
Scope	ABC Education (Kindergarten Management)
Level	User level

Intention context	to courage and motivate the employees
Minimum guarantees	Notes are post but not shown in the employees page
Success guarantees	Notes are shown in the employee page
Primary actor	Administrator
Stakeholder's interest	To be updated and improve their work
Precondition	Admin should be logged in and there should be at least one employee.

Use 1.6	Phone number connected with WhatsApp
Scope	ABC Education (Kindergarten Management)
Level	User level
Intention context	To easily communicate with parents
Minimum guarantees	Number is shown only for call
Success guarantees	Phone number when clicked links directly to WhatsApp and the message is sent.
Primary actor	Administrator
Stakeholder's interes	To be updated with the condition of their children
Precondition	Admin should be logged in and numbers should be shown in database

Use 1.7	Email of the kindergarten linked with the gmail.
Scope	ABC Education (Kindergarten Management)
Level	User level
Intention context	To communicate with parents for official events
Minimum guarantees	Email is shown but not connected with gmail directly.

Success guarantees	Email of the kindergarten linked directly with gmail and message sent to the specific parents.
Primary actor	Administrator
Stakeholder's interest	To be updated and to follow the events of the kindergarten
Precondition	Admin should be logged in and emails should be shown in database

Use 1.8	Printing information
Scope	ABC Education (Kindergarten Management)
Level	User level
Intention context	To have a document with all the information needed for all the children
Minimum guarantees	Print button is shown but does not take all the information
Success guarantees	Every information is shown in the print document
Primary actor	Administrator
Stakeholder's interest	To have documents of all the information of their children
Precondition	Admin should be logged in and view the database

Use 1.9	write feedback for teachers reports
Scope	ABC Education (Kindergarten Management)
Level	User level
Intention context	To control the work of the teachers
Minimum guarantees	To view and access the reports
Success guarantees	To give feedbacks for every report
Primary actor	Administrator

Stakeholder's interest	To improve the work and to stay updated
Precondition	Admin should be logged in and have access in reports

Use case 1.10	Changing the password and the username
Scope	ABC Education (Kindergarten Management)
Level	User level
Intention context	Have a secure, unique and private log in
Minimum guarantees	Setting section is shown to change username and password is shown
Success guarantees	All the changings are saved
Primary actor	Administrator
Stakeholder's interest	Be secure that username and password is unique
Precondition	Admin should be logged in first

Use case 1.11	Phone number connected with WhatsApp
Scope	ABC Education (Kindergarten Management)
Level	User level
Intention context	To easily communicate with employees
Minimum guarantees	Number is shown only for call
Success guarantees	Phone number when clicked links directly to WhatsApp and the message is sent.
Primary actor	Administrator
Stakeholder's interest	To be updated with the latest emergencies
Precondition	Admin should be logged in and numbers should be shown in the database of the employees.

Use case 1.12	Email of the kindergarten linked with gmail.
Scope	ABC Education (Kindergarten Management)
Level	User level
Intention context	To communicate with employees for official events
Minimum guarantees	Email is shown but not connected with gmail directly.
Success guarantees	Email of the kindergarten linked directly with gmail and message sent to the specific employee.
Primary actor	Administrator
Stakeholder's interest	Staying updated with the last events in the kindergarten
Precondition	Admin should be logged in and emails should be shown in the database of the employees.

Use Case 2.1	Writing notes for the teacher
Scope	ABC Education (Kindergarten Management)
Level	User level
Intention context	To ask special request to teachers
Minimum guarantees	Notes are written but not shown in teacher's page
Success guarantees	Teacher receives the notes
Primary actor	Parent
Stakeholder's interest	To be updated with the condition and special requests for each child
Precondition	Parent should be logged in

Use Case 2.2	Changing the password
Scope	ABC Education (Kindergarten Management)
Level	User level

Intention context	Have a secure, unique and private log in
Minimum guarantees	Setting section is shown to change username and password is shown
Success guarantees	All the changings are saved
Primary actor	Parent
Stakeholder's interest	Be secure that username and password is unique
Precondition	Parent should be logged in first

Use Case 2.3	Edit/Delete the data
Scope	ABC Education (Kindergarten Management)
Level	User level
Intention context	To edit and delete specific information about their child
Minimum guarantees	The information is registered on the database.
Success guarantees	The information is shown in the app
Primary actor	Parent
Stakeholder's interest	To update the information in order to create a better interaction
Precondition	Should be logged in

Use Case 2.4	Upload the mandate
Scope	ABC Education (Kindergarten Management)
Level	User level
Intention context	To show to admin that the monthly payment is done
Minimum guarantees	Mandate submitted
Success guarantees	Changes saved and reflected to admin

Primary actor	Parent
Stakeholder's interest	To check if all payments are done
Precondition	Parent should be logged in and have picture of the tac coupon

Use Case 2.5	Printing information
Scope	ABC Education (Kindergarten Management)
Level	User level
Intention context	To have a document with all the information needed for their children registered in the kindergarten
Minimum guarantees	Print button is shown but does not take all the information
Success guarantees	Every information is shown in the print document
Primary actor	Parent
Stakeholder's interest	To have documentation with the information needed
Precondition	Parent should be logged in

Use Case 3.1	Upload the tax Coupon of the salary
Scope	ABC Education (Kindergarten Management)
Level	User level
Intention context	To show to admin that the salary is taken
Minimum guarantees	Tax coupon of salary is submitted
Success guarantees	Changes saved and reflected to admin
Primary actor	Teacher
Stakeholder's interest	To check if all employees took the salary
Precondition	Teacher should be logged in

Use case 3.2	Changing the password
Scope	ABC Education (Kindergarten Management)
Level	User level
Intention context	Have a secure, unique and private log in
Minimum guarantees	Setting section is shown to change username and password is shown
Success guarantees	All the changings are saved
Primary actor	Teacher
Stakeholder's interest	Be secure that username and password is unique
Precondition	Teacher should be logged in

Use case 3.2	Filling the attendendance.
Scope	ABC Education (Kindergarten Management)
Level	User level
Intention context	To update parents if the child has been present or absent
Minimum guarantees	The table of all the children names shown
Success guarantees	Filling the attendance sheet daily and saving changes
Primary actor	Teacher
Stakeholder's interest	Informing parents about the attendance of their child
Precondition	Teacher should be logged in and have access to the database shown

Use 3.3	Phone number connected with WhatsApp
scope	ABC Education (Kindergarten Management)
level	User level

Intention context	To easily communicate with parents
Minimum guarantees	Number is shown only for call
Success guarantees	Phone number when clicked links directly to WhatsApp and the message is sent.
Primary actor	Teacher
Stakeholder's interes	To be updated with the condition of their children
Precondition	Teacher should be logged in and numbers should be shown in database

Use case 3.4	Email of the kindergarten linked with gmail.
Scope	ABC Education (Kindergarten Management)
Level	User level
Intention context	To communicate with parents for official events
Minimum guarantees	Email is shown but not connected with gmail directly.
Success guarantees	Email of the kindergarten linked directly with gmail and message sent to the specific parents .
Primary actor	Teacher
Stakeholder's interest	Staying updated with the last events in the kindergarten
Precondition	Teachers should be logged in and emails should be shown in the database.

Use Case 3.5	Writing notes for the parent
Scope	ABC Education (Kindergarten Management)
Level	User level
Intention context	To respond to special request from parents
Minimum guarantees	Notes are written but not shown in parent's page
Success guarantees	Parent receives the notes

Primary actor	Teacher
Stakeholder's interest	To be updated with the condition and special requests for each child
Precondition	Teachers should be logged in

Use 3.6	Writing reports
Scope	ABC Education (Kindergarten Management)
Level	User level
Intention context	Reporting to admin every week about the overall situation in the kindergarten
Minimum guarantees	Reports written weekly
Success guarantees	Uploading reports
Primary actor	Teacher
Stakeholder's interest	Being updated with the interaction between teachers and children
Precondition	Teachers should be logged in

Use Case 4.1	Reporting the exact date of monthly payment
Scope	ABC Education (Kindergarten Management)
Level	User level
Intention context	To make sure that everything is being reported on time
Minimum guarantees	Having access to the calendar
Success guarantees	Submitting and saving the changes
Primary actor	Economist
Stakeholder's interest	Check if the parents have done the monthly payment of the kindergarten
Precondition	Economist should be logged in

Use Case 4.2	upload the mandate of the monthly payment of the kindergarten
Scope	ABC Education (Kindergarten Management)
Level	User level
Intention context	To make sure that everything is transparent between admin and parent
Minimum guarantees	Mandate submitted
Success guarantees	All changes saved
Primary actor	Economist
Stakeholder's interest	Check if the parents have done the monthly payment of the kindergarten
Precondition	Economist should be logged in

Use Case 4.3	Reporting the deadline date of next monthly payment
Scope	ABC Education (Kindergarten Management)
Level	User level
Intention context	To make sure that admin is aware of the date of the next payment
Minimum guarantees	Having access to the calendar
Success guarantees	Submitting and saving the changes
Primary actor	Economist
Stakeholder's interest	Being updated and prepared for the next payment
Precondition	Economist should be logged in

Use Case 4.4	upload the tax coupon payment of the kindergarten
Scope	ABC Education (Kindergarten Management)
Level	User level

Intention context	To make sure that everything is transparent and to inform the admin of all the expenses and costs
Minimum guarantees	Tax of Coupon submitted
Success guarantees	All changes saved
Primary actor	Economist
Stakeholder's interest	Being aware of the expenses of the kindergarten
Precondition	Economist should be logged in

Use Case 4.5	upload the excel sheet with the calculation of the VAT
Scope	ABC Education (Kindergarten Management)
Level	User level
Intention context	Making calculations about the monthly incomes and costs and then calculating if VAT should be paid that month or not
Minimum guarantees	Filling excel sheet
Success guarantees	All changes saved and excel sheet uploaded
Primary actor	Economist
Stakeholder's interest	Being aware of the monthly expenses, incomes of the kindergarten and being aware of the value of VAT
Precondition	Economist should be logged in and have installed Excel

Use Case 4.6	Printing information
Scope	ABC Education (Kindergarten Management)
Level	User level
Intention context	To have a document with all the information needed for taxes, incomes and costs
Minimum guarantees	Print button is shown but does not take all the information

Success guarantees	Every information is shown in the print document
Primary actor	Parent
Stakeholder's interest	To have documentation with the information needed
Precondition	Parent should be logged in

Use Case 5.1	Writing notes for the parent
Scope	ABC Education (Kindergarten Management)
Level	User level
Intention context	To report about the mental health of each child
Minimum guarantees	Notes are written but not shown in parent's page
Success guarantees	Parent receives the notes
Primary actor	Psychologist
Stakeholder's interest	To be updated with the condition of each child
Precondition	Psychologist should be logged in and have access to database

Use Case 5.2	Printing information
Scope	ABC Education (Kindergarten Management)
Level	User level
Intention context	To have a document with all the information about the mental health of the children in order to measure the progress of each of them
Minimum guarantees	Print button is shown but does not take all the information
Success guarantees	Every information is shown in the print document
Primary actor	Psychologist
Stakeholder's interest	To have documentation with the information needed
Precondition	Psychologist should be logged in
